

Project brief: Relaxr - build a front end for the blog.

Due: Friday 28th August 2015

submit via: github

Assessment: marking scheme (14 marks total)

Brief:

Relaxr was really impressed by your work last week and wants you to continue development on their landing page. Starting in class, you will work to build out a more complex layout for their company site. They decided on creating a blog, and their back-end engineers will be focused on developing the blog's functionality.

They want your front-end skills to style their designs using HTML and CSS so Relaxr's engineers can begin integrating. Once again, the designers have handed you a [basic design file](#) and the JPEG below to help you bring the blog to life. Submit the finished version for homework.

Technical Requirements (7):

1. Use [inline-block](#), [floats](#) or [flex](#) with [vendor prefixes](#) in your CSS to achieve a two-column layout
2. Use the correct Open Sans Google Font typeface to style the text denoted in the design file and according to the JPEG provided
3. Use proper filename conventions (lowercase, .html)
4. Use a single external CSS stylesheet to style all pages
5. Use a background image for the headers
6. Add a hover effect to all the links using pseudo-classes
7. Integrate drop caps using pseudo-classes

Notes:

CSS

background color: #f0efef

yellow: #f9e42e

dark blue: #033048

light grey: #606161

almost black: #121212

Font: Open Sans (Google Font:
<https://www.google.com/fonts#UsePlace:use/Collection:Open+Sans>)
Weight: Light, Light Italic, Semibold, Extrabold

Nav: Semibold, 24px

Main column width: 700px
Sidebar width: 240px
Gutter: 20px

Post Titles - 40px, semibold
"How I implemented Relaxr in 2 weeks and changed my life."
"I traveled across the globe thanks to Relaxr's Excel automation"

Body text - Light 24px
Read More - 24px semibold

Sidebar headers - 32px, extra bold
Categories list - 24px, light
"Success stories
Stats
How tos
Best of
Business tips"

About text - 22px light
Proin sed justo vel sapien varius auctor. Proin scelerisque massa at luctus tincidunt.
Fusce porttitor, sapien sed tincidunt fringilla.
Learn More - Semibold, 22

Bonus:

Make a dialogue box pop up when a user clicks "Sign Up Now!" that reads "We're Not Ready For Sign-Ups...Yet"
